

WHAT IS CLAIMED IS:

1. A polyamide composition for welding comprising
(A) an aromatic polyamide having a molar fraction of aromatic monomers
5 among monomer components of said polyamide of at least 0.2, and
(B) an aliphatic polyamide,
wherein the weight ratio of (A) and (B) is from 99:1 to 20:80.
2. A polyamide composition for welding comprising
10 (A) an aromatic polyamide having a carboxylic acid component consisting
of terephthalic acid, isophthalic acid or a mixture of terephthalic acid
and isophthalic acid and optionally aliphatic acid; and a diamine
component of aliphatic diamine, and,
(B) aliphatic polyamide,
15 wherein the weight ratio of (A) and (B) is from 99:1 to 5:95.
3. A polyamide molded article comprised of two or more members, wherein
at least two of the members have been welded using the polyamide composition for
welding of Claim 1.
- 20 4. The composition of claim 2 wherein said aromatic polyamide
comprising the carboxylic acid component being terephthalic acid or a mixture of
terephthalic acid and isophthalic acid; and the diamine component being
hexamethylenediamine or a mixture of hexamethylenediamine and 2-methyl
25 pentamethylenediamine.
5. A polyamide composition for welding comprising
(A) an aromatic polyamide wherein the carboxylic acid component is
30 aliphatic dicarboxylic acid; and the diamine component is aromatic
diamine or a mixture of aromatic and aliphatic diamines, and
(B) aliphatic polyamide,
wherein the weight ratio of (A) and (B) is from 50:50 to 95:5.
- 35
